WORK EXPERIENCE

FreeLancer

NOV 2022 - PRESENT

- Designed and deployed AI-powered applications using LLMs (OpenAI/Gemini), focusing on real-world use cases like content automation, analytics, and decision support.
- Built RAG-based systems using Pinecone vector databases for domain-specific question answering over PDFs, documents, and GitHub repositories.
- Implemented backend APIs using Fast API with scalable, production-ready architectures and low-latency inference pipelines.
- Integrated OCR pipelines for scanned document ingestion and structured data extraction.
- Deployed applications using cloud-based infrastructure, ensuring reliability, scalability, and secure API access.

Junior Developer | Pactera Edge Tech Pvt Ltd.

MAY 2021 - OCT 2022

- Worked on the UPS BOSS enterprise application, supporting application delivery for the Taiwan (APAC) region.
- Provided L2/L3 production support for business-critical systems used across Malaysia and the Philippines.
- Collaborated with cross-functional teams (development, QA, and client stakeholders) to ensure timely releases and stable deployments.

EDUCATION

B.Tech. in Electronics and Communications Engineering

Institute of Aeronautical Engineering, Hyderabad (2012 - 2016)

Relevant Coursework: Data Structures, Probability & Statistics, Digital Signal Processing

PROJECTS & OPEN-SOURCE CONTRIBUTIONS

ExamAI

- An AI-powered IIT-JEE prep platform using RAG (Pinecone + OpenAI/Gemini) with Fast API backend, OCR ingestion, Razor pay subscriptions, and a React-based analytics dashboard.
- Tech: Python, React, Tailwind CSS, FastAPI, RAG

ProfileMaster

- Developed Profile Master, an AI-driven career optimization platform using React, Firebase, and OpenAI, featuring automated resume analysis, multi-format document processing (PDF/DOCX), and a secure Razorpay-integrated tiered subscription engine.
- Tech: React, Tailwind CSS, TypeScript, Firebase

DevPostAI

- Engineered an automated technical content generation platform using React 19 and the GitHub REST API to analyze repositories in real time and produce platform-specific social media posts for LinkedIn, Twitter (X), and WhatsApp.
- Tech: React, Vanilla CSS, GitHub REST API

ArticleGen

- Developed a multi-agent AI article generation pipeline using CrewAI, orchestrating Researcher, Creator, Reviewer, and Publisher agents for automated research, writing, quality review, and Markdown publication.
- Implemented agent collaboration and task sequencing to enable end-to-end autonomous content creation workflows, showcasing practical use of agentic AI systems for real-world automation.
- Tech: Python, CrewAI Framework

SKILLS

Programming & Development:

- Languages:** C#, Python, JavaScript, TypeScript, SQL
- Backend:** ASP.NET Core, Node.js
- Frontend:** React

AI / ML & Data:

- Frameworks:** TensorFlow, PyTorch
- Data & Analysis:** Pandas, NumPy, Matplotlib
- AI App Frameworks:** Streamlit, Gradio

GenAI & LLM Frameworks:

- LangChain:** RAG Pipelines, tools & agents.
- LangGraph:** Stateful and multi-agent workflows.
- LangSmith:** Prompt tracing, evaluation and Observability.
- Hugging Face:** Open-source models & inference

Cloud & DevOps:

- DevOps:** GitHub
- Containerization:** Docker

Databases:

- SQL Server, MySQL, PostgreSQL, MongoDB, Supabase

Tools:

- VS Code, Visual Studio, Cursor
- GitHub, Antigravity
- Streamlit, Gradio
- Google Colab, Kaggle

AWARDS & HONORS

- 🏆 Team Excellence - Pactera (2022)

AREAS OF INTEREST

- Generative AI & Large Language Models
- Code generation & developer productivity
- AI governance and responsible AI
- Building scalable, real-world AI systems
